Our Mission

Our vision is to develop a Smartphone app that can be used by everyone in the world to find out in minutes whether they have COVID-19. We are utilizing cutting-edge artificial intelligence technology to identify patterns undetectable by humans from the unique respiratory signatures of lungs damaged by the virus.

We offer worldwise tour plan recently

Make she'd moved divided air. Whose tree that hath own upon them it multiply was blessed

Why This Will Work

Because COVID-19 affects the throat and lungs of patients, even in early stages, detecting it in early stages from breathing and coughing sounds is feasible.

Our team is mentored by leading authorities in AI, signal processing, and clinical research from both industry and academia.

What can you expect.

We are working tirelessly to rapidly develop accurate AI algorithms and a Smartphone app / website. We expect to have a prototype by July and a production-grade system by August. Our app will keep improving weekly and will provide predictions of COVID-19 risk.

How You Can Help

"Great opportunities to help others seldom come, but small ones surround us every day."**– Sally Koch**
